Project Name	
Maximum Marks	3 Marks

Project Executable Files

The project team shall submit all executable, deployable, and supporting files required for the installation, execution, testing, and evaluation of the **CaptionAI** application. All files shall be appropriately organized and accompanied by the necessary setup instructions and dependency information.

The submitted materials shall enable the evaluator to execute or deploy the application using the provided source files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / N/A)
1	Complete source code, including all application files and folders required for execution of the CaptionAI project.	Yes
2	README / Setup Guide containing the instructions required to install dependencies, configure the application, and execute the project.	Yes
3	requirements.txt / dependency file containing the libraries and packages required for application execution.	Yes
4	Database schema / seed files, where applicable.	N/A
5	Environment configuration template such as .env.example, containing the required configuration variables without exposing confidential API credentials.	Yes
6	Deployed application URL, where the application is hosted and accessible for evaluation.	Yes
7	APK / executable binary for mobile or desktop applications, where applicable.	N/A
8	Dockerfile / containerization configuration, where applicable.	N/A
9	Test files, test cases, and corresponding test results demonstrating the functional operation of the application.	Yes
10	Demonstration video or project walkthrough, where required for evaluation.	Yes

Project Execution Requirements

The **CaptionAI** application shall be executed in accordance with the setup instructions provided in the README file. The required Python dependencies shall be installed using the prescribed dependency file, and the necessary environment variables shall be configured before application execution.

The application uses the **Groq API with the LLaMA 3.3-70B Versatile model** for AI-powered content generation. Therefore, the API credential shall be configured securely through the environment configuration and shall **not be included directly in the submitted source code**.

Submission Statement

The project team confirms that the required source code, dependency files, configuration templates, testing materials, and demonstration resources have been prepared for submission. All applicable files shall be maintained in the designated project repository under the appropriate project-development and demonstration sections.

Note: For items such as the deployed URL, test files, and demo video, mark **Yes only if you have actually prepared/submitted them**. For Docker, database, APK, etc., **N/A** is appropriate if those components are not part of your CaptionAI implementation.
